Index Construction

Universe

The universe for the indexes is all US domiciled stocks. Certain stocks domiciled in countries other than the US are also included in the universe, provided the US is the principal place of business for these stocks and their primary stock exchange listing is in the US.

Stocks that trade over the counter (pink sheets or bulletin board) are excluded from the Benchmarks.

Certain pass-through securities, including REITS, Mortgage REITS, Master Limited Partnerships, Closed-End Funds and Business Development Companies, are excluded from the Benchmarks. REITS and Mortgage REITS are included in the VettaFi US series.

The starting universe is updated semi-annually based on data as of the “Snapshot Dates”.

Selection

Stocks must maintain an R-Score greater than 1 over the 90 days preceding the “Snapshot Dates” to be included in a Benchmark. The R-Score is calculated as follows:

$$\text{R-Score} = \text{90-day ADTV (thousands USD)} / \text{Float Market Capitalization (millions USD)}$$

Stocks must have traded at least 22 days in the 90 days preceding the “Snapshot Dates”.

Stocks are selected for inclusion in the Benchmarks based on the company’s full market capitalization rank in the starting universe.

Stocks must either have a free float of 20% or an adjusted free float market cap that is at least equal to the median adjusted free float market cap of the SNR500 before their addition.

Only one share class or listing is included. The most liquid share class is selected. (see Index Maintenance Policy):
